

Smarter Locks. Stronger Networks. Proven Protection.

We are proud to be the preferred supplier to an FNO for a major network build connecting key data centres.

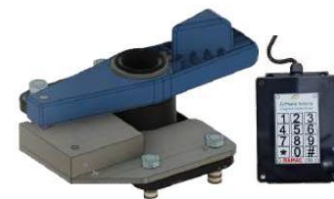

To secure these critical infrastructure points, the RAMAC[™] ALM1 Asset Lock Mechanism, powered by G-Matrix Systems, was selected to provide reliable access control and asset protection.

The RAMAC[™] ALM1 combines encrypted access management with real-time status reporting, ensuring only authorised personnel gain entry while instantly flagging and alerting on unauthorised access or tampering.

Retrofit-ready, the RAMAC[™] ALM1 integrates seamlessly into existing infrastructure, with communication over the Sigfox network, offering the FNO flexible, reliable communication, even in remote areas.

Key Features:

- Encrypted access via the RAMAC[™] App and RAMAC[™] Portal
- Real-time status alerts for open/closed and tamper events
- Device battery health monitoring with daily Heartbeats
- Retrofit design for easy installation and cost-effective upgrades.
